

E-parking bays

Safe, sustainable and efficient mobility

The future is electric

When it comes to the future of cars, everything seems to be moving in one direction – and that is electric!

Societal pressures for more environmentally friendly car solutions are growing, and each year, car manufacturers add more electric vehicles to their portfolio. With more and more electric and hybrid cars hitting the roads, the demand for electric parking spaces will be ever-increasing. In this brochure, we will present some of our popular ev parking solutions to provide inspiration for this particular type of markings.

Charging bays that stand out

Finding the nearest charging station is much easier when the parking space is made in an eye-catching colour. The coloured surface makes the charging bay stand out from the rest of the parking area and the surroundings. This of course makes it easier for drivers to find a way to 'stay charged', but it also allows you to create attention around your city, business or brand as being forward-thinking and environmentally conscious.

PREFORMED BORDERS

Make it easy to identify where specific traffic areas, lanes or parking spaces starts and stops by delimiting them with PavSmart™ Border. This curb-shaped preformed MMA is recommended specifically for parking entrances and exits, and parking spaces.

COLOUR DEMARCATION

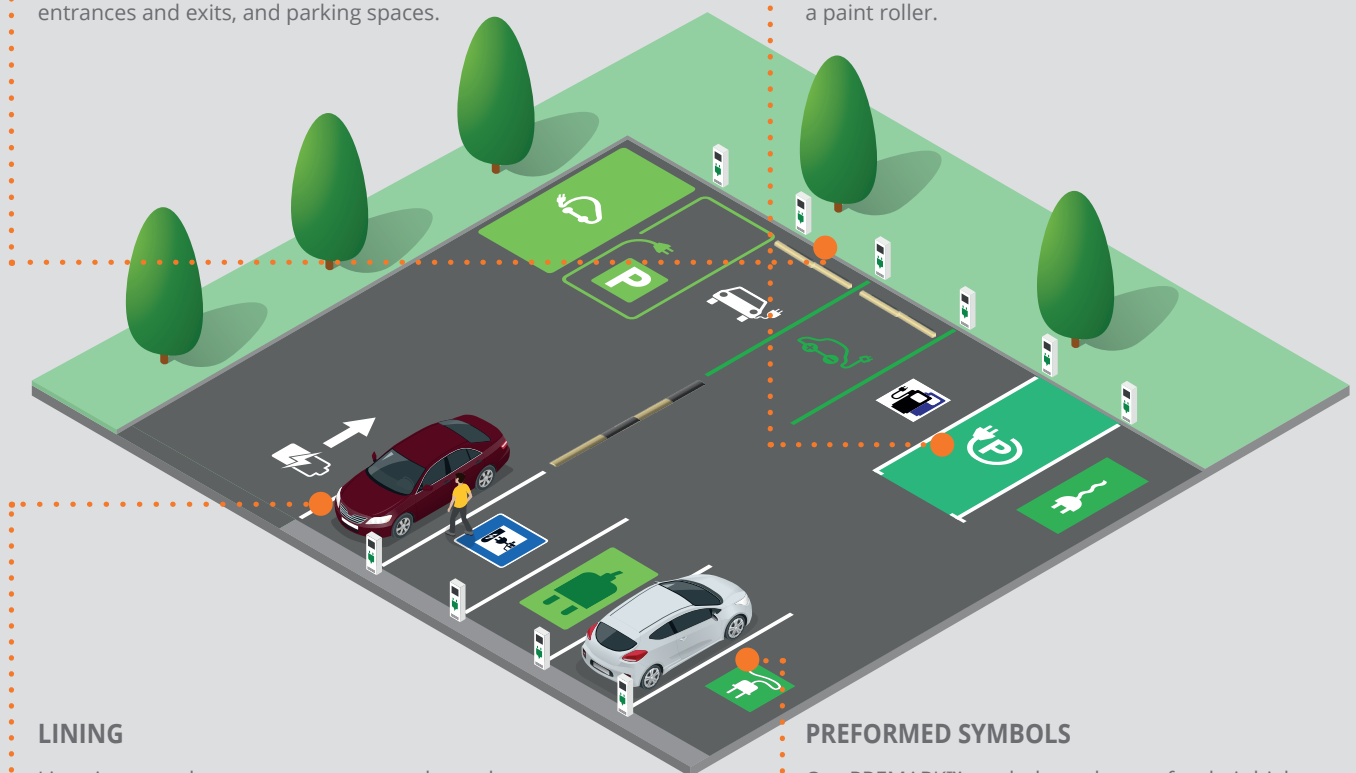

With our colourful plural components you can make parking bays stand out while adding skid-resistance to the surface. For smaller areas, we recommend hand-applying PlastiRoute™ Rollgrip or Rollplast with a paint roller.

LINING

Lines in car parks are necessary to mark out the individual parking bays. A clear separation makes it easy to navigate the car park which helps to avoid confusion and keep the traffic flow organised. This is easily done with our PREMARK™ Rolls that separate each parking bay in no time and with a durable result.

PREFORMED SYMBOLS

Our PREMARK™ symbols are known for their high durability and are developed for permanent use outdoors. They go perfectly on top of a brightly coloured surface as this combination creates an eye-catching and practical traffic area solution.

Build a colourful foundation

The best results always start with a good foundation. With our MMA product line, you can easily make your parking spaces stand out while adding skid-resistance to the surface as well. As our markings are added to existing infrastructure, they offer a both fast, easy, and cost-effective solution that can be adapted to fit every need.

If you are doing a smaller number of parking spaces, you can simply hand-apply PlastiRoute™ Rollplast with a paint roller. For fast application on larger areas, on the other hand, we recommend that you apply the material (Spraygrip/Sprayplast) with our AreaSpray™ machine.

Our MMA products provide a complete marking solution that is easy and quick to apply. Due to the cross-linking technology between PlastiRoute and our preformed thermoplastic symbols, they bind well with each other without the use of a primer.

Leave your mark with PREMARK™

Contrasting symbols with bold and colourful surfaces is an ideal way to leave a lasting impression. While the bright surface catches your attention, the identifying symbol makes the purpose of the parking bay clear.

With a wide selection of PREMARK™ symbols to choose from, it is easy to find a symbol suitable for your need. But, should you have a specific design in mind, we have our own in-house design studio ready to make the exact symbol you are looking for.

To clearly outline each parking space, we recommend our PREMARK rolls. They offer a quick and easy way to mark out individual spaces. With little effort and equipment, you can simply combine the rolls with a preformed EV symbol to create a parking bay in no time. PREMARK rolls are available in traditional white as well as in green which is a great match for the environmentally friendly EV solution.

Marking the future with you
